FIG. 12

The flowchart illustrates a speech recognition process with a timeline at the bottom. The timeline includes markers for **reco.start** (283), **speech detected** (285), **babbleTimeout** (295), and **maxTimeout** (299). The process flow is as follows:

- Initial State:** The process begins with a state labeled **onSilence** (291).
- Speech Detected:** Upon **speech detected** (285), the process transitions to a state labeled **onNoReco** (293).
- Unrecognizable Utterance:** If the utterance is **unrecognizable**, the process transitions to a state labeled **onNoReco** (293).
- Recognition Result:** The process transitions to a **recognition result** diamond (305).
- Confidence Check:**
  - If **confidence above threshold**, the process transitions to a state labeled **onReco** (303).
  - If **confidence below threshold**, the process transitions to a state labeled **onNoReco** (293).
- Recognizer Error:** If there is a **recognizer error**, the process transitions to a state labeled **onTimeout** (297).
- Cancel Recognition:** The process transitions to a state labeled **cancel reco** (295).
- Return Result:** The process transitions to a state labeled **return result** (303).
- Stop Recognition:** The process transitions to a state labeled **stop reco** (293).
